

Custom or Standard RF and Microwave Connectors and Adapters

Why Choose Connectronics?

Since 1985, Connectronics has manufactured thousands of RF and Microwave connector and adapter designs.

We Offer:

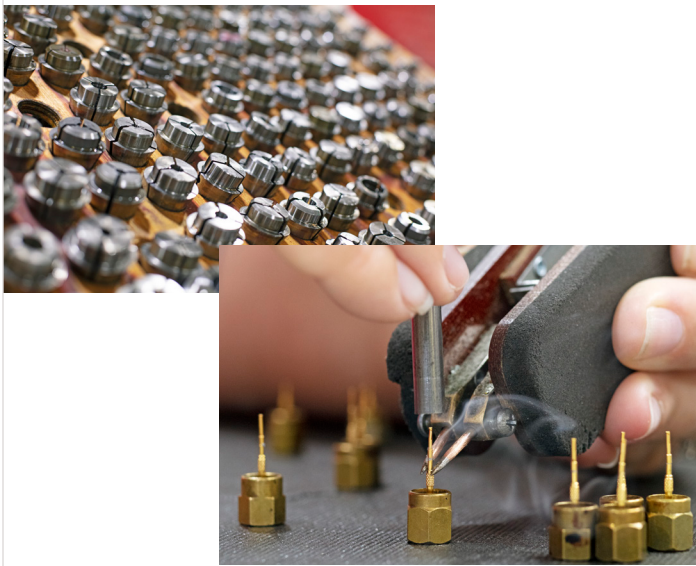

- Standard and custom designs
- Quick turnarounds
- Flexible order quantities
- A library of over 5,500 styles
- American-made components with certifications

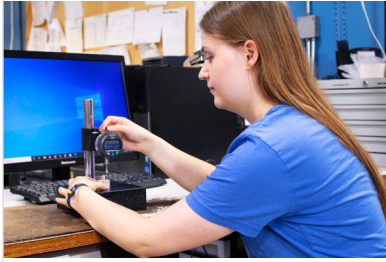

Industry-Leading Delivery Timeframes

Need something fast? Just ask. We work lead time miracles for our customers. Requesting a custom or unique item doesn't mean waiting forever for it to arrive. Lead times are significantly reduced by making most everything in-house in the U.S.

No / Low Minimum Order Quantities

A new design doesn't require you to order hundreds (or thousands!) of parts if you don't need them. We design and manufacture orders for anything from one piece to tens of thousands.

In-House Engineering and Design

Designing new connectors and adapters or modifying existing designs is in our DNA. Our engineering team provides solutions for new projects daily, working closely with our manufacturing and assembly operations to accurately execute your designs, from raw material procurement to final assembly and packaging.

Standard and Custom Fabricated Components

Translate your design requirements into reality with our high-precision manufacturing equipment and processes. We manufacture using a broad range of raw materials and match the right plating finish to your application to balance performance, cost, and durability. Never sacrifice features that are important to you.

Quality RF and Microwave Connectors and Adapters

We design and manufacture RF and Microwave connectors and adapters for OEMs, Brokers, and Distributors. A wide variety of coaxial and triaxial solutions are manufactured, including standard, non-standard, custom, and hard-to-find components. We also manufacture high-precision machined components such as contacts, housings, insulators, and other specially designed parts to custom specifications.

High or Low Volume Manufacturing Runs

Get flexible ordering options and quick turnaround times, whether you are ordering standard RF and Microwave connectors and component parts in small or large quantities. We have the capabilities and expertise to make almost every component in-house to deliver your order quickly and meet your production requirements. We strive to provide supply-chain solutions that make us easy to work with, including blanket orders, consignment inventory, custom marking and packaging, and low/no minimum order quantities.

Extensive Selection of Component Materials and Finishes

We manufacture components using a broad assortment of raw materials and provide a variety of plating finishes. If we've made a component from brass and you want it in 303 stainless steel... no problem. If a part is typically plated nickel, but you need olive drab... you got it. Want gold plated contacts instead of silver... done.

We Never Obsolete a Design

We don't phase out or make a design obsolete. We understand that you need a consistent, reliable source for essential components for your projects and products. We provide solutions even if your order volume is small.

Massive Library of Connector and Adapter Designs

We have an extensive collection of over 5,500 connector and adapter designs, each assembled from a library of over 20,000 different components. Due to this deep knowledge base, we can quickly manufacture a broad assortment of connectors and adapters without additional engineering.

Exceptional Customer Service

We want to be your go-to resource for RF and Microwave connector and adapter suppliers.

Here's how we'll accomplish that:

- Provide quality parts
- Industry-leading delivery timelines
- Exceed customer service expectations
- Promptly respond to requests
- Accommodate changes and special requests when possible
- Provide honest answers
- Only commit to what we can deliver

Manufactured in the U.S.A.

Our manufacturing facility is in Edinburgh, Indiana, and we provide original certifications for all our components and products. We are vertically integrated to ensure that all our components meet quality and performance standards. Our team is in one location, so we collaborate quickly and communicate needs directly to the team manufacturing and assembling products.
